

PiF-200/300 – Large Air Volume Intelligent Dust Collector –

Amano Puls Jet dust collectors PiF series are fully automated functions and dependable operation for any type of dust collection applications such as cutting, drilling, mixing, loading, and many other works. It suite for the automotive industry, chemical manufacture, electronic manufacture, and many other industrial applications.

Molded filter

Pulse jet

General dry dust

Max. airflow

Premium efficiency
motor

Features:

- Intelligent Dust Collector with Auto Pulse Jet Type
- Middle Air Volume from 60 to 180 m³/min
- 5.5kW/7.5kW/11.0kW Package type dust collector
- Differential pressure sensor
- Use-friendly message
- Various combination of dust discharge

- Molded cartridge filter

7 type of filter are available

Material: Polyester

Surface treatment: –

Corresponding models: PiF

Application: General dried particles

- Collecting efficiency: Good, For dust having a particle diameter of about 10 μ m.
- Heat resistant temperature (F) : Normal temperature 40°C (104°)
- Dust removal: Pulse jet

Nanofiber filter option without extra cost

- The nanofiber filter area has a about 2.5 times larger than standard filter.
- Dust is collected with a nanofiber layer and can be easily removed with plus jet.
- By large filter area and reducing the filter filtration speed, that make life of filter longer than ever.
- Nanofiber has self-extinguishing function, it prevents fire from dust collector.

Conventional filter

After collecting dust

Dust is entered inside filter in deep.

Nanofiber filter

Dust is collected with a nanofiber layer and can be easily removed with plus jet.

Automatically controls the fan speed

Built-in inverter automatically operates with the set value of air volume. (Fixed motor rotation speed is also possible)

Automatic pulse jet

Automatically start puls jet for filter cleaning

Automatic data logging

QR code will be displayed and get error and operation history. it can be retrieved as CSV data.

Automatically notify the status of the filter condition

The condition (differential pressure) of the filter is displayed on the LCD as an icon.

Remote control

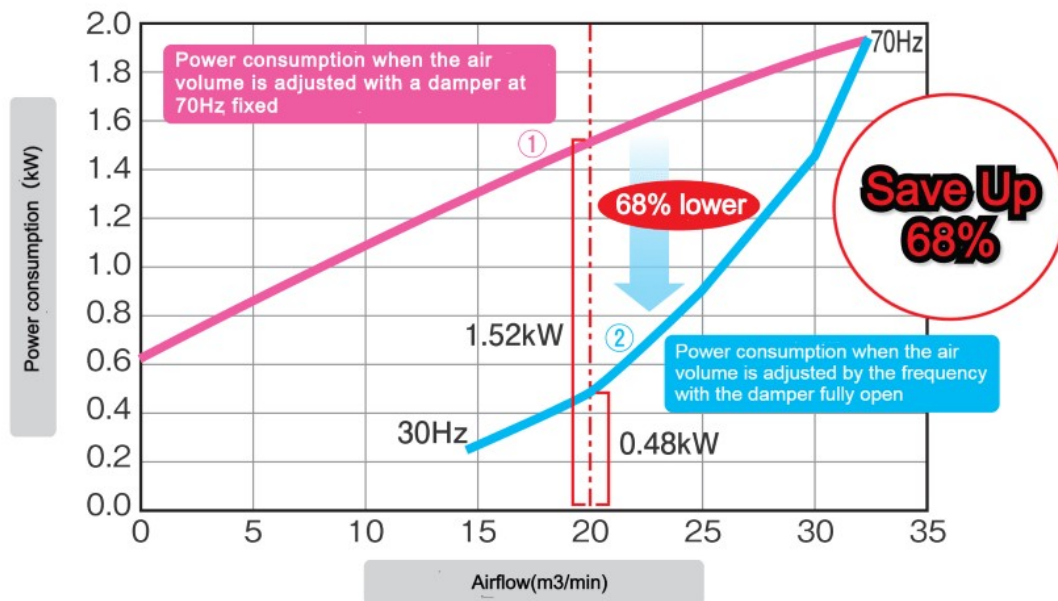

It can be operated in conjunction with production machine.

Inverter control

- Air volume control by an inverter is superior in energy saving effect to volume control by a damper.

- By automatically operating with the air volume set by the inverter, it is possible to prevent excessive volume operation that causes clogging of the filter.

Downflow

The downflow reduce flying dust inside dust collector and prevent the dust reattachment. It suppresses the increase in filter pressure loss and improves the filter removal performance.

Reduce installation and maintenance space

There is no restrictions on the installation space. it is easy to install and easy maintenance.

• Internal Structure

- **Various combination**

- **Sample Installation**

PIF-200BL Type

PiF-3000 BL Type

SPECIFICATION

Particular	Unit	PiF-200	PiF-300
Power Supply	Volt	220	220
Frequency	Hz	60	60
	Phase	3P	3P
Output	kw/hp	15/20	22/30
Airflow	m ³ /min	160	240
Static Pressure	kPa	2.40	2.40
Suction Port Ø	mm	450	580
Dimension BL Type (W x D x H)	mm	2132×1130×3667	3028×1230×3922
Weight	kg	1270	1840
